

# Job vacancy - Site supervisor electrician

3i Ltd,  
61 József Attila avenue  
Szeged, Hungary

## Job description

We are looking for an electrician with great field experience, who is willing to learn our internal installation guidelines and habits, and able to lead a team of 2-7 electricians on sites all over the world but mainly in Europe. Work includes electrical assembly, building and fitting electrical and pneumatic components (cable trays and pneumatic piping included), understanding technology and mechanism of systems, testing and commissioning together with software engineers, on-site support for customer.

What we offer is an interesting and stable job and the possibility to learn from very experienced team members.

Fluent Hungarian and at least intermediate English or German knowledge is essential.

## Company description

Our company has great experience in supplying control systems for automotive filtration, swarf and metal scrap discharge systems.

We have practical experience in the process control of several industrial processes, including pharmaceutical production, tunnel furnaces, splinter curing and power supply systems.

One of our most important lines of work in industrial electronics is the collection of measurement data.

## Additional information

**Type:** Full-time

**Experience:** Electrician or electrical engineer experience needed

**Industries:** Industrial Automation
